

FINGERPRINT AUTHENTICATION

Presented by:

Puneeth...Saranya...Vasanth.

Contents:

- **Acquisition & Authentication**
- **Biometric Authentication**
- **Fingerprints**
- **How to make fake finger**
- **Matches between Fake – Original finger**
- **How a system firewall allow access to the user.**

Acquisition:

- The process of capturing or obtaining data, such as acquiring fingerprint images, photos, or other biometric information.

Authentication:

- It is the process of verifying the identity of a user, system, or entity to ensure that they are who they claim to be.
- It is a fundamental aspect of security and access control in various systems, applications, and networks.

Biometric Authentication:

- **Relies on unique physical or behavioral characteristics of an individual for identity verification.**
- **Common biometric methods include fingerprint recognition, iris scanning, face recognition, voice recognition, and more.**

Finger-print Recognition:

- **Fingerprint recognition refers to the automated method of identifying or confirming the identity of an individual based on the comparison of two fingerprints.**
- **Fingerprint recognition is one of the most well-known biometrics.**
